

# Inflation Data

Aaron Peikert

2022-09-08

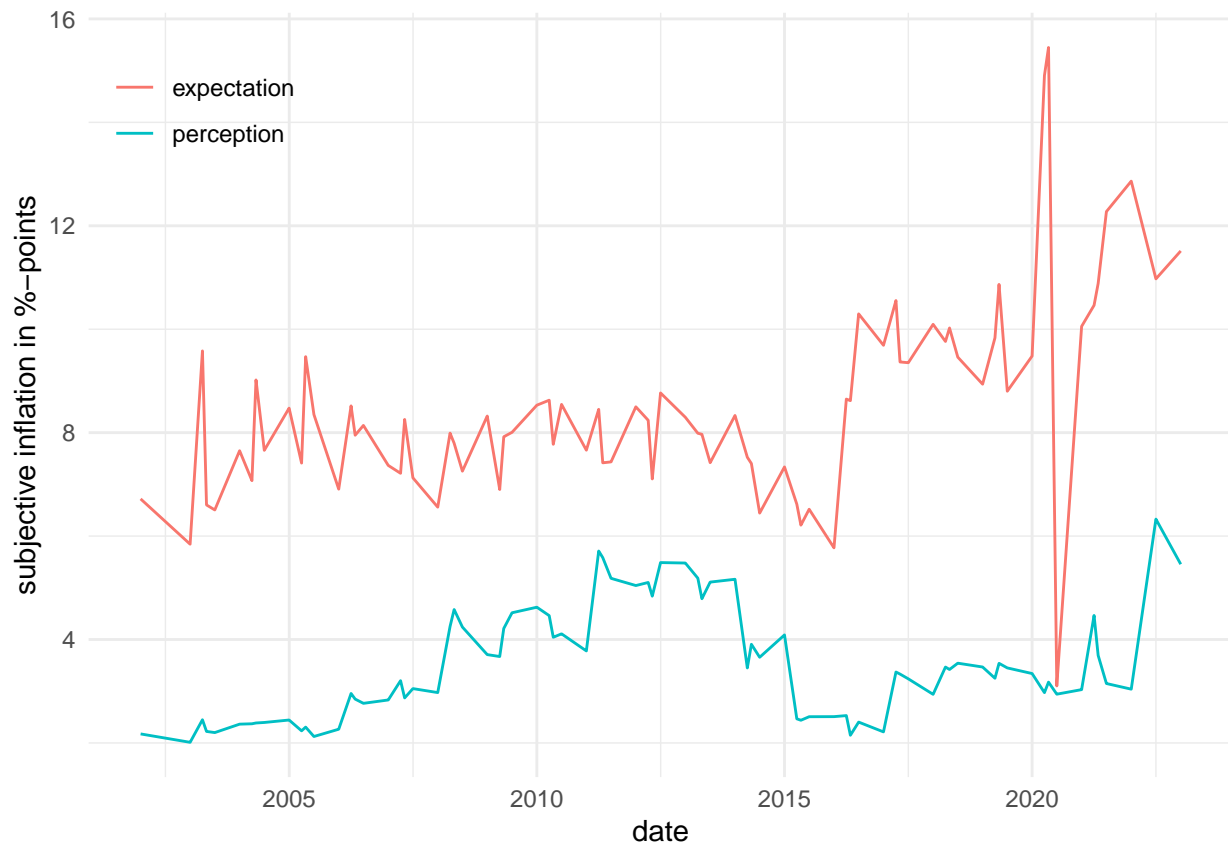

The dataset we use stems from the Bank of England Research datasets.

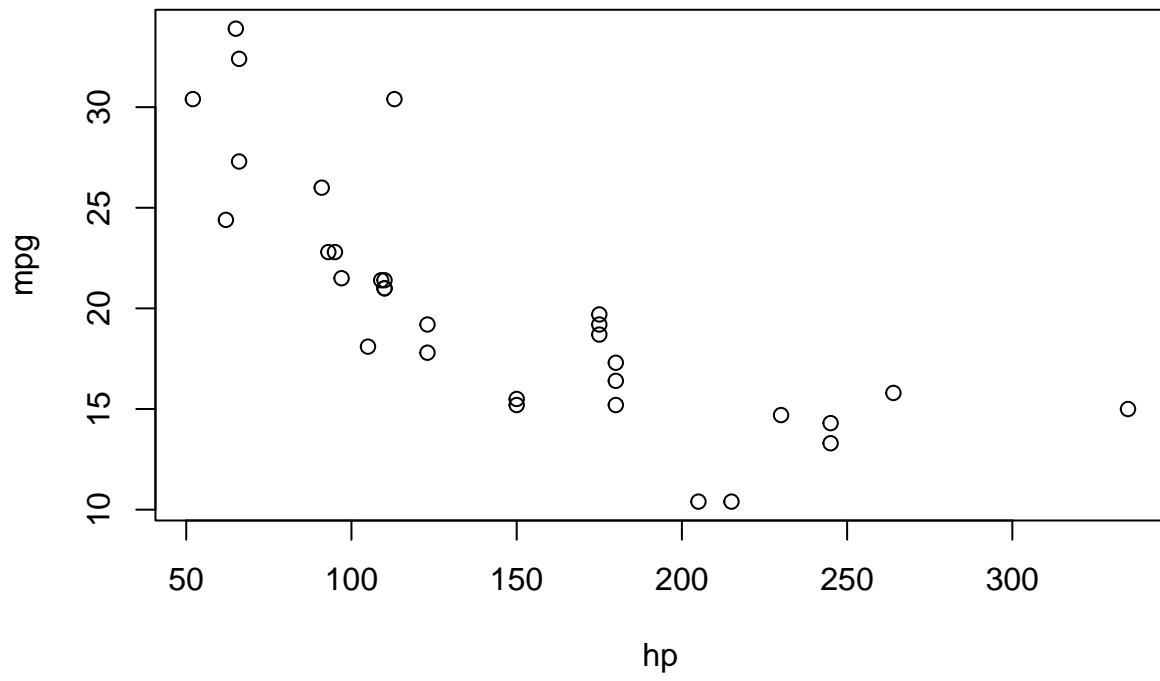

## The quote

This dataset contains the individual responses to our Inflation Attitudes Survey, a quarterly survey of people's feelings about inflation and other economic variables like the interest rate.

```
# 2. use relative locations  
# (relative paths instead absolute, names instead of indices)  
inflation_raw <-  
  readr::read_rds(here("data", "raw", "inflation.rds"))
```

For this dataset the Bank of England asked 209,761 people for their opinion on the perceived and expected inflation. The survey has run quarterly since 2001.
